

The inflatable touch

tote m. air

THE ONLY LIGHTWEIGHT AND 100% FREE-STANDING TOTEM THAT REMAINS INFLATED WITHOUT AN ELECTRIC COMPRESSOR

Our Solution for:

Outdoor Activities

Marketing and Communication Campaigns

Signage

Sports and Cultural Events

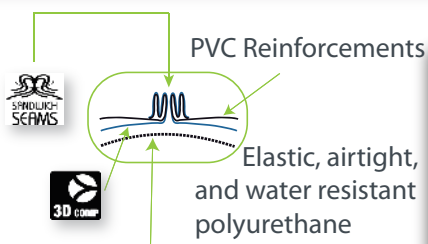

Unbelievably lightweight: 1.5 to 3.5 kg

Extreme Performance : Like a reed that bends but never breaks, it withstands high winds greater than (more than) 70 Km/h as well as extreme conditions (tested on the ice of the 2 Alps and the beaches of Camargue)

Convenient: Fits in a backpack

Easy to set-up / to dismantle: rapidly inflates in 2 minutes with an electric pump

Eco-friendly : Respects the environment (no compressor means no CO2 emissions)

The A.P.S. technology (Airtight Pressure Stability) consists of the rigidity of the Dacron and the airtightness of the polyurethane tube. Inflated at 0.3 bar, our system offers unparalleled lightness and rigidity.

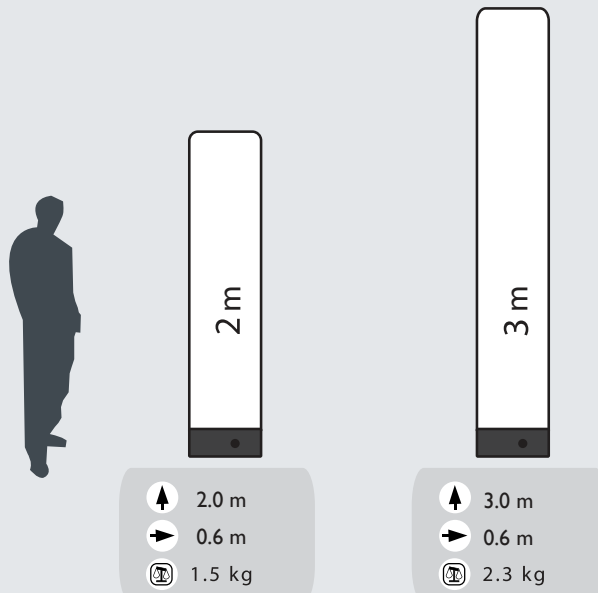

The Dacron (or 3D Dacron) is used to create bunches of structure. It is a mutiaxial composite fabric of 145 gr/m² which is able to resist stress in any and every direction.

The seams of tubes are closed with 8 strata including a self-sealing technical reinforcement. These stitches, made with nylon thread, takes the form of a sandwich with maximal resistance. The tube is thus able to withstand the pressure of inflation

SIZES

PERSONALIZATION

Digitally printed graphic sock

High resolution fabric printed using dye sublimation

Stability

Our totems are equipped with a zippered portion. This allows you to slip an MDF base (2 kg) into the bottom of the unit to further increase stability.

Accessories

Full range of accessories available for optimal use of your structure.

Standard 220V electric pump
Optional upon request, battery-powered electric pump, outside ground stake, or steel

Outdoor Kit

Eco-Responsibility

The totem does not need electricity for set-up or dismantle, making it a mobile and most importantly eco-responsible marketing tool.

- Totem
- Transport bag
- MDF base
- 220 volt electric pump
